Making Technology Work for You!

Custom Engineered, Integrated Solutions for Courts

AVI is a design / build electronic systems integrator with years of experience in the design & installation of electronic solutions for courts. We understand that each courtroom is different - with different acoustics, procedures, and requirements.

Our design solutions are based on creating a series of modular systems, which are integrated together into a seamless solution. A modular approach allows one to customize a system for today's needs yet allows for future growth without jeopardizing your investment and increasing your Return On Investment. The heart of courtroom technology is the audio system. Specifically the capture of what is being said during the proceedings. Without a quality audio system to capture & feed the other court systems, you are left with "Garbage In, and regardless what you do, you will have - Garbage Out".

Our audio system has been designed and extensively tested to integrate & add additional features to the CourtFLOW Digital Audio Recording Systems (DARS) from Voice IQ Inc. We have been working with Voice IQ for 4 years, developing a comprehensive audio interface to support the various CourtFLOW DARS.

Our Teleconferencing / Videoconferencing module becomes an integral part of the audio & digital recording systems. Supporting standard H.320 and H.323 protocols, we integrate into the audio and sound reinforcement system to utilize the existing microphones & speakers and then add the capability of capturing both the audio & video within our digital recording system.

Our integrated system is also tailored to record both sides of telephonic language interpretation as well as providing private, off record interpretation. ADA solutions for remote sign interpretation as well as Assistive Listening is also supported.

Our Evidence Presentation modules are integrated into the audio & video systems and supports the Multi-Media Embedding feature of the CourtFLOW DARS. To provide for interactive annotations, our modules utilize the PointMaker Annotation System from Boeckeler Instruments, Inc.

All of our integrated solutions are custom designed to support your specific court's needs. As Audio/Video and Information Technologies converge, our line of AVIT solutions allows control and monitoring over LAN & Internet.

Call us today to discuss your requirements and to conduct a needs analysis. We will design a custom / integrated solution that will meet your needs and your budget.
