

The case for CourtFLOW

PC-DART® CourtFLOW is here to bring order in the court.

CourtFLOW digital court recording software has been designed specifically with the courts in mind. It allows judges, court administrators and justice departments to dramatically improve productivity while sharply reducing transcription, storage and retrieval costs. CourtFLOW's digital technology replaces out-dated tape systems for recording court proceedings. In the past, hastily scrawled short-hand notes, illegible forms and dozens of loose sheets of paper were the order of the day for most courtroom annotations. Today, CourtFLOW provides a high quality digital record impervious to age and impossible to misplace. Just as importantly, it allows for annotation of case proceedings in a revolutionary new way through the use of a comfortable and intuitive Windows™ interface. An annotator just chooses the specific speaker or pre-defined event with the click of a button and types in miscellaneous text notes, creating annotations easily and effortlessly as a case unfolds. CourtFLOW does not materially change tried and proven court processes; it streamlines them by reducing some of their bottlenecks.

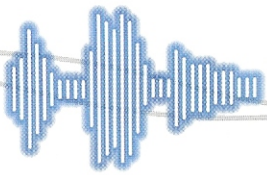

CourtFLOW sets a new precedent in records management.

CourtFLOW creates a complete record of all proceedings. Annotations are integrated into the audio and each annotation is linked by an electronic bookmark to the exact position in the audio recording. Annotations can even be added, selected or modified by the court reporter at any time, during or after the trial or hearing, without impacting the official record. Fast forward or rewind the audio to search through the annotation list to find specific sections of case audio with absolute precision. In addition, judges and lawyers can insert their own private annotations from their laptops or workstations within the courtroom.

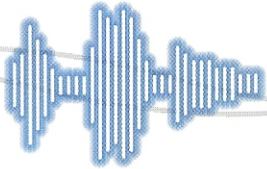

The search is over.

Since database technology is key to the CourtFLOW design you always know precisely where the individual court records are for instant retrieval. Searching for annotated key words, even specific speakers or exact points in time, is just a mouse click away. The names of court officials, expert witnesses and even commonly used legal terms and phrases are equally well managed. Entering a name in the database once allows it to be accessed at any work station. CourtFLOW digital recording software allows you to search effortlessly and retrieve accurately, within a trial or track the trial across sessions.

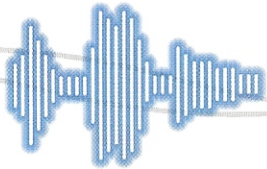

Storage for the new age.

CourtFLOW manages archiving easily and seamlessly. The complete record can be transferred easily to a removable medium such as CD-ROM or to Digital Audio Tape (DAT). Back up issues are addressed with CFBackup. It has been designed to work with CourtFLOW and provides a fail safe recording method that circumvents network problems. CFBackup allows case recording to continue seamlessly even if network trouble should occur.

Flexible, versatile and powerful.

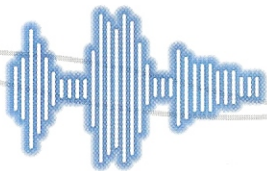

CourtFLOW has the unique capability to record in several different file formats. The ability to record in ADPCM, TrueSpeech™ and MPEG 2 presents you with a flexibility to balance audio quality with file size and business needs, a feature not available in other digital court recording systems. For example, because of its small file size (3.6 MB per hour per channel), using TrueSpeech™ gives you the ability to exploit the power of the Internet. You can readily forward the record in an electronic format to transcription centers outside the courtroom. The ability to move files virtually anywhere means users can outsource their transcription electronically to cost saving transcription centers.

The Family of CourtFLOW products.

CourtABLE - A portable CourtFLOW with an easy upgrade path to CourtFLOW. It can run on a laptop or workstation and is ideal for a circuit judge or committee chairperson to take from court to court, hearing to hearing or meeting to meeting.

CourtABLE Lite - The ideal solution for smaller groups with less demanding recording and annotation needs.

IN SUMMATION: Nothing meets the needs of courts like CourtFLOW.

- Displays customized, pre-set "pick list" of attorneys, prosecutors and other participants
- Integrates Case Management and Court Docketing Software
- Allows simultaneous access by multiple users
- Up to 8 simultaneous and continuous recording channels per courtroom
- Voir Dire/Sidebar capabilities allow portions of the testimony to be excluded
- Roll calls and Capias
- Exports complete sessions or just specific case
- Scalable to meet your needs

CourtFLOW. The Court is now in order.
